

Flowchart Structure

User Journey

- 1. **User Visits Kare**
 - The user navigates to the Kare platform.
- 2. **User Opens Platform**
 - The homepage loads instantly, providing a seamless entry point.

Frontend Layer

- **HTML/CSS UI Renders**
 - A clean and intuitive interface is displayed.
- **Request Form Appears**
 - Users can easily fill out a request form.

- **Client-side Validation Runs**
 - Immediate feedback is provided to the user.
- **Emergency Flag Detected**
 - If an urgent request is identified, an emergency flag is triggered.

User Request Processing Funnel

Made with  Napkin

API Gateway Layer

- **REST API Receives Request**
 - The request is processed through a robust API.
- **JWT Authentication**
 - Secure user authentication is implemented.
- **Route Request**
 - Requests are routed to the appropriate backend services.
- **Rate Limiting**
 - Protects the system from overload by limiting requests.

API Gateway Layer Process

Backend Layer (Python)

- **FastAPI / Django Logic**
 - The backend logic is built using FastAPI or Django for efficiency.
- **AI Triage Analyzes Severity**
 - AI algorithms assess the urgency of requests.
- **Task Scheduler Queues Request**
 - Requests are queued for processing.
- **Emergency Requests Bypass Normal Queue**
 - Urgent requests are prioritized.

Request Processing Funnel

Made with  Napkin

Database Layer

- **PostgreSQL Stores Case**
 - All cases are stored in a PostgreSQL database.
- **Logs Timestamps**
 - Important timestamps are logged for tracking.
- **Tracks Status Updates**
 - The system monitors and updates the status of each case.

Alert Dispatch Layer

- **Send SMS**
 - Immediate SMS notifications are sent for urgent cases.
- **Push Notification**
 - Users receive push notifications on their devices.
- **Email Backup**
 - An email backup is sent for additional assurance.
- **Notify Assigned VA in Under 30 Seconds**
 - Virtual Assistants (VAs) are alerted quickly to ensure prompt action.

Alert Dispatch Methods

Made with  Napkin

Resolution Layer

- **VA Accepts Case**
 - The assigned VA accepts the case for resolution.
- **ETA Shown Live via WebSocket**
 - Users can see real-time updates on estimated time of arrival (ETA).
- **Task Completed**
 - The VA completes the task.
- **Case Closed and Archived**
 - The case is closed and archived for future reference.

Extra Features

- **Clickable Nodes Showing Explanations**
 - Users can click on nodes in the flowchart for detailed explanations.
- **Animated Arrows Between Steps**
 - Visual transitions enhance understanding of the flow.
- **Pulse Effect on Emergency Nodes**
 - Emergency nodes pulse to draw attention.

Metrics Cards

- **30s Dispatch SLA**
 - Service Level Agreement for dispatching alerts.
- **99.9% Uptime**
 - Assurance of system reliability.
- **<200ms AI Triage**
 - Fast response time for AI analysis.
- **3-Channel Alerts**
 - Notifications sent via SMS, push, and email.

Enhancing Flowchart Understanding

Made with  Napkin

Tabs / Sections

1. **Flowchart**
 - Visual representation of the user journey and system architecture.
2. **Frontend Architecture**
 - Detailed breakdown of the frontend components and technologies used.
3. **Backend Architecture**
 - Overview of backend processes and frameworks.

4. **Benefits**
- Highlighting the advantages of using the Kare platform.

Output Format

The design can be delivered in multiple formats to suit different needs:

- **Modern HTML/CSS/JS Web App**
 - A fully functional web application that users can interact with.
- **Editable Professional Flowchart Diagram**
 - A diagram that can be modified for presentations or documentation.
- **Figma-Style UI Prototype**
 - A prototype that showcases the UI design and user interactions.

Design Delivery Formats

Made with  Napkin

Conclusion

This design specification serves as a comprehensive guide for developing the Kare platform's SaaS dashboard. By focusing on a clean aesthetic, responsive design, and robust functionality, we aim to deliver an exceptional user experience that meets the needs of our clients. The integration of advanced features and a well-structured flowchart ensures that users can navigate the platform efficiently and effectively.

Functionality

Capabilities

The specific features a system offers.

Performance

How well features perform their intended tasks.

User Needs

How effectively features meet user requirements.

Usability

The overall ease of use and efficiency.

Satisfaction

The influence on user happiness and contentment.
